

Multi Agent Aggregator for Open Network - LLD

High-Level Architecture

As a first step towards solving the customer pain points to onboard into ONEST, Google Cloud Open Education (GCOE) service envisioned to provide an L1 Accelerator which in the future roadmap could evolve into a strong line of products to support ONEST customers from Google Cloud and also contribute to the One Google Initiative with ONEST.

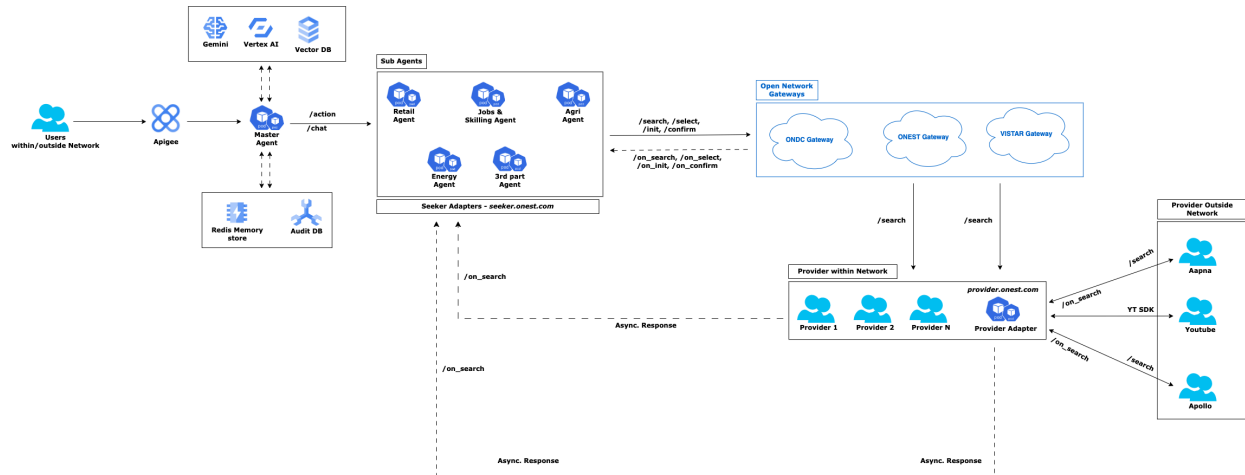

- Multi-agent architecture
- User's Voice command runs through an NLP to understand the Intent
 - Model - gemini 1.5-pro Fine Tuned with a set of 500 examples
 - Examples are in JSONL format
- Master Agent is the first responder
 - Master Agent connects to Gemini
 - Responses from Model will return a specific formatted JSON with Providers (*which network to go to?*); **Specific Intents** (Find, Filter, Add,

Update); **Action items** (Search, Select, Init, Confirm etc.) and Messages (corresponding data points to send to the Open Network)

- Passes the JSON to Platform specific Sub-Agents; decided by the **Provider** field as described above
- All responses from multiple networks reach to **Master-agent**, consolidated and send back as one response back to the font end
- Each **Sub-agent** act like an independent unit capable to communicate with a specific Open Networks and for a specific domain
 - JSON data from **Master-agent** is processed to convert it into a request for a specific Open Network
 - **Sub-agent** send the request to designated Open Network e.g. ONEST (for *Education, Jobs, Skilling*) or VISTAR (for *Agri*)
 - Each **Sub-agent** would take care of Security, Fan-out, Audit logging etc.
 - Each **Sub-agent** will perform standard Open Network specific security checks like Payload Signing, Verification of request header etc.
 - If needed **Sub-agent** will also decide on Fan-out of requests using some event-drive mechanism
- Open Network will broadcast the request from the Sub-agents to the **Providers** or **Sellers** of the Open Network
- The responses from Open Network would be sent directly to the Sub-agents directly as per Open Network specs
- **Sub-agents** send the consolidated response back to **Master-agent** and in turn to the frontend and update the same accordingly

East-West Flow

Protocol Adapter (*L1 Accelerator*)

Communication between Sub-agents to Open networks can be direct; but that would need a lot of boilerplate code to be written and multiple different configurations.

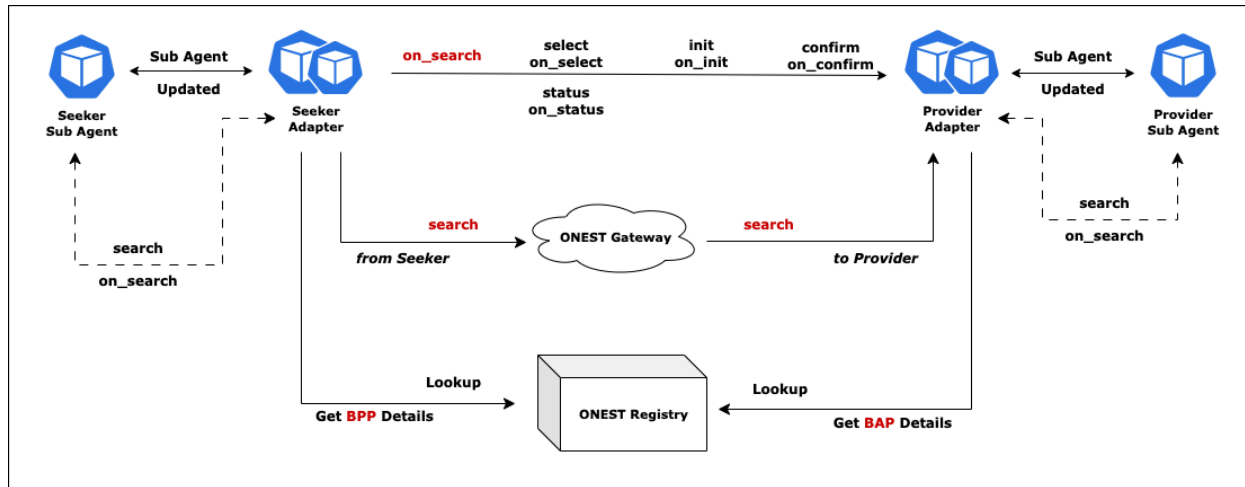

To avoid that, there will be an Adapter interface to make the communication between Domain specific Sub-agents to the corresponding Open Network seamless and extensible.

Primary responsibility of the Protocol Adapter will be to handle:

- Protocol validation
- Version management
- Security checks
- Scalability

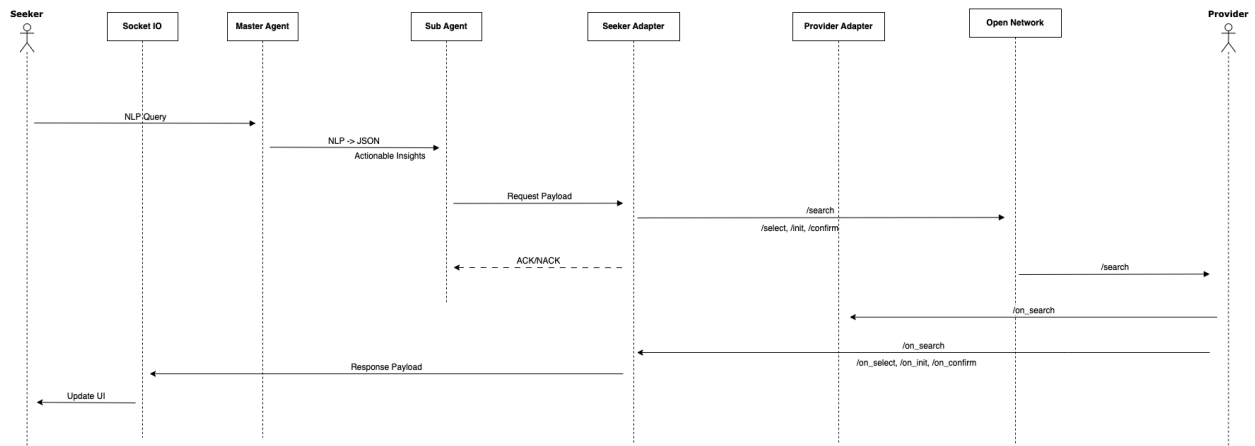

Following is a logical flow of the protocol adapter for both Provider and Seeker interfaces

Logical Flow

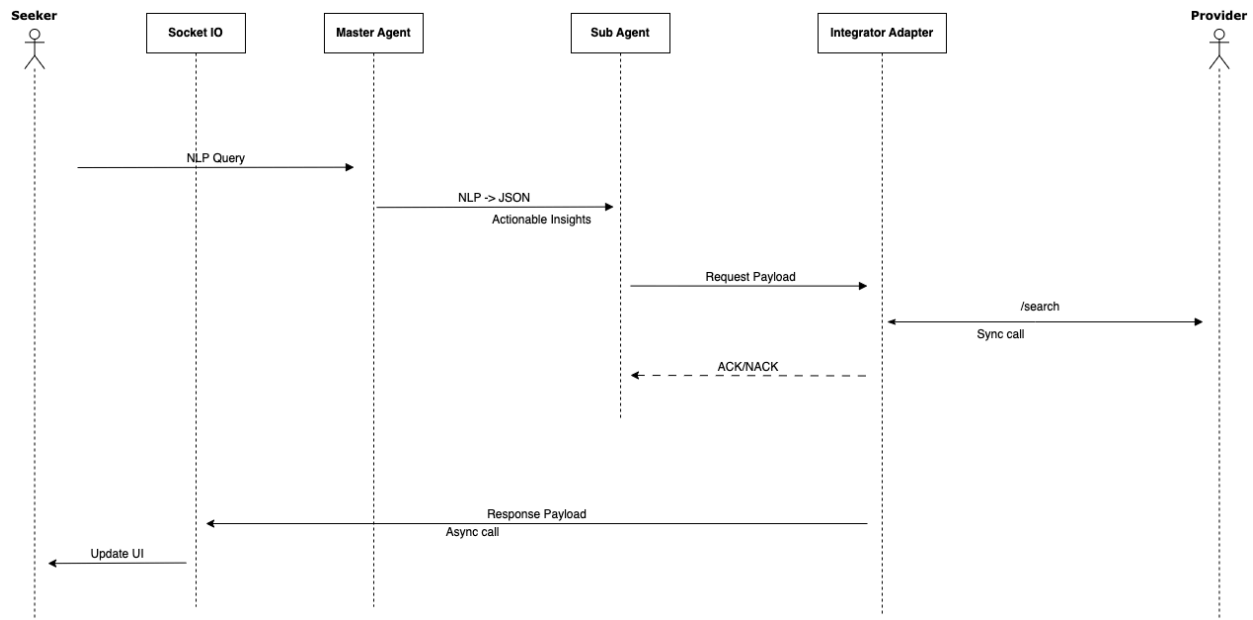

Sequential Flow

All Open Networks

Integrator Networks (*Outside Open Network*)

Payloads - Master Agent

Developer with the following attributes: Critical Thinking- You are able to
skillfully conceptualise, apply, analyse and evaluate information gathered from
observation, experience or communication and use it as a guide to action
Data-Driven attitude – You often propose solutions or make a point in a logical
and objective manner, substantiated with accurate data and evidence Dealing
with Ambiguity – You can effectively cope with change and uncertainty, and are
comfortable when things are up in the air Goal-oriented – You are driven and
can be counted on to exceed goals. You steadfastly push yourself and others to
achieve results all the time Problem Solving – You can easily identify and
solve complex problems in a methodological manner "

Developer with the following attributes: Critical Thinking- You are able to
skillfully conceptualise, apply, analyse and evaluate information gathered from
observation, experience or communication and use it as a guide to action
Data-Driven attitude – You often propose solutions or make a point in a logical
and objective manner, substantiated with accurate data and evidence Dealing
with Ambiguity – You can effectively cope with change and uncertainty, and are
comfortable when things are up in the air Goal-oriented – You are driven and
can be counted on to exceed goals. You steadfastly push yourself and others to
achieve results all the time Problem Solving – You can easily identify and
solve complex problems in a methodological manner "

Developer with the following attributes: Critical Thinking- You are able to
```

skillfully conceptualise, apply, analyse and evaluate information gathered from observation, experience or communication and use it as a guide to action
 Data-Driven attitude – You often propose solutions or make a point in a logical and objective manner, substantiated with accurate data and evidence
 Dealing with Ambiguity – You can effectively cope with change and uncertainty, and are comfortable when things are up in the air
 Goal-oriented – You are driven and can be counted on to exceed goals. You steadfastly push yourself and others to achieve results all the time
 Problem Solving – You can easily identify and solve complex problems in a methodological manner "
